

## **VACCINES**

The following vaccines are required of all new horses boarding at Ferguson Farm:

- EWT (Eastern/Western Encephalomyelitis & Tetanus combined)
- FLU (Equine Influenza)
- EHV/RHINO (Equine Herpes Virus)
- WNV (West Nile Virus)
- PHF (Potomac Horse Fever)
- RABIES (Rabies Virus)
- STRANGLES (Equine Distemper) (Streptococcus) \*\* This vaccine is given intranasally. It is required unless there is a medical reason why your horse cannot receive the vaccine, which must be documented by a licensed vet.

## **COGGINS**

Horse must have a negative Coggins (test for Equine Infectious Anemia) done within 11 months of arrival to the farm. Once the horse becomes a boarder, the test is not required each year unless the horse leaves the farm for trail rides or events, then the test will be a requirement each vaccine season.

## **DEWORMING**

The deworming schedule of new boarders will be discussed and a plan of action set in place to get all new horses on the same schedule and the existing herd.

Our herd is very healthy, with low to no shedders. Upon recommendation of Virginia Tech Equine Field Services, we are only deworming twice a year, in the spring and fall. \*\* this schedule is subject to change based on herd fecal count and per guidance of Virginia Tech Equine Field Services. Fecals are randomly checked each spring during spring vaccines and wellness checks.

In the spring (the first weekend in April) we deworm with Ivermectin

In the fall (the first weekend in October) we deworm with Quest Plus
